Project Report On

Project Name [GoMartApplication]

Supervised By

Dr. Md. Iftekharul Mobin

Submitted By:

Name	ID
1. Nusrat Zaman Liya	23-51614-2
2. Sadiya Akter	24-588146 -2
3. Sumaiya Tabassum	24-56110-1
4. Azra Sadia Eramoni	23-53943-3

Assessment Criteria	Not Attended/ Incorrect (0)	Inadequate (1-2)	Average (3)	Good (4)	Excellent (5)
Evaluation Criteria (CO2)	Total =		Evaluation Criteria (CO3)	Total =	
Requirement fulfillment			Organization of the application		
Validation			Representation and Integration of Database		
Verification			Graphical User Interface		

CO2: Display and verify the mean of a real-life Project using the concepts of C# Graphical User Interface based environment with database integration to depict a desktop-based application.

Assessment Criteria	Not Attended/ Incorrect (0)	Inadequate (1-2)	Average (3)	Good (4)	Excellent (5)
Evaluation Criteria	Evaluation Definition				

Requirement fulfillment	Fails to demonstrate any understanding of real-life scenariobased project development or functional requirement identification. There is no attempt to depict a project or identify functional requirements accurately.	Demonstrates limited understanding of real-life scenariobased project development and functional requirement identification. The project depicted lacks coherence or relevance to real-life scenarios, and functional requirements are inaccurately identified or insufficiently described.	Presents a basic depiction of a real-life scenariobased project and identifies some functional requirements. However, the project lacks depth or complexity, and some functional requirements may be vaguely defined or missing key details.	Effectively demonstrates a realistic scenariobased project and accurately identifies most functional requirements. The project is well-developed with appropriate complexity, and functional requirements are clearly articulated with relevant details.	Exhibits an exceptional understanding of real-life scenariobased project development and accurately identifies all functional requirements. The project is meticulously developed with thorough attention to detail, reflecting a comprehensive understanding of Object-Oriented Programming project development activities.
Validation	Fails to demonstrate any understanding or implementation of validation forms in their system. There is no attempt to deal with data validation, and validation requirements are completely ignored or incorrectly applied.	Demonstrates limited understanding of validation forms and data validation techniques. While some attempt may be made to implement validation, it is incomplete or poorly executed, leading to inadequate handling of data validation.	Shows a basic understanding of validation forms and data validation techniques. They attempt to implement validation, but some aspects may be missing or incorrectly implemented, resulting in partial or inconsistent handling of data validation.	Effectively demonstrates the use of validation forms and implements data validation techniques. Validation is mostly accurate and comprehensive, ensuring the proper handling of data input and verification in the system.	Exhibits an exceptional understanding and implementation of validation forms and data validation techniques. Validation is meticulously implemented with thorough attention to detail, ensuring robust data validation procedures and contributing to the overall
					reliability and integrity of the system.

Verification	Fails to demonstrate any attempt to verify the system data or functional requirements. There is no evidence of understanding or implementation of verification processes, and data flow is not considered.	Demonstrates limited understanding of verification processes and data flow in the system. Verification attempts are incomplete or inaccurate, and there is insufficient consideration given to ensuring data integrity and functionality.	Shows a basic understanding of verification processes and attempts to verify system data. However, verification efforts may be inconsistent or lack thoroughness, and there may be gaps in ensuring proper functional requirements and data flow.	Identifies and verifies system data, ensuring proper functional requirements are met. Verification efforts are mostly accurate and thorough, with attention to ensuring data integrity and appropriate data flow within the system.	Exhibits an exceptional understanding of verification processes and meticulously verifies system data. Verification efforts are comprehensive and precise, with a keen focus on ensuring all functional requirements are met and maintaining proper data flow throughout the system.

CO3: Prepare and Explain a real life desktop based application synthesizing several component of C# along with development tools to adhere the given requirements.

Assessment Criteria	Not Attended/ Incorrect (0)	Inadequate (1-2)	Average (3)	Good (4)	Excellent (5)
Evaluation Criteria	Evaluation Definition				
Organization of the application	Fails to identify any suitable real time application or requirements for project development activities related to OOP.	Limited understanding about the project scopes and scenarios or identification of functional requirements.	Lacks depth or relevance to OOP project development activities and may contain inaccuracies. Real-life scenarios are mentioned, but the discussion lacks depth or clarity.	Consider and integrate the idea of several core aspects of the project along with relevance of real-life scenarios. Demonstrating solid understanding the application presentation.	Generalize and exhibits an exceptional understanding of project preparation according to a real-life scenarios. Also contains proper and insightful identification of the system which is comprehensive and precise.
Representation and Integration of Database	Fails to identify and present any understanding or	Limited understanding of the database	Lacks depth or relevance to database	Integrate the database with the forms	Exhibits an exceptional understanding

	implementation of database. Also failed to integrate the data with the project itself.	concepts or their proper way of using in a real time project. While some attempt may be made to implement but it is incomplete or poorly executed, leading to inadequate design.	integration with the application. Shows a basic understanding but some aspects may be missing or incorrectly implemented, resulting in partial or inconsistency. May lack proper normalization.	properly and implements it with proper validation which is mostly accurate and comprehensive ensuring the proper handling of data input and verification along with general normalization.	and implementation of database ensuring attention to detail, and robust data manipulation procedures and contributing to the overall clarity.
Graphical User Interface	Fails to present or prepare GUI based application interfaces. There is no evidence of creating or integrating such things according to their usefulness.	Limited understanding of graphical user interfaces. Lack of design knowledge. Very poor attempt to make such things which are currently obsolete or can't be identified as coherent.	Shows a basic understanding of creating user interfaces. Most of them are interconnected but maybe some of them lack it. However, most of it can be described as user friendly.	Effectively identifies and meet the consider the simplicity. Design related works are mostly accurate and taken proper attention to ensuring a userfriendly coherent system.	Exhibits an exceptional work design following a high standard of simple and elegant work. Several controls and mechanism has been organized in a preferred way according to the coherent usage .

GOMART

Online Grocery Marketplace Management System

A Desktop-Based Application Using C# Windows Forms and SQL Server

PROJECT REPORT

Project Name: GoMart – Online Grocery Marketplace Management System

Application Type: Desktop-Based Application

Programming Language: C#

GUI Framework: Windows Forms

Database: Microsoft SQL Server

Database Language: T-SQL

Database Connectivity: ADO.NET

Development Environment: Visual Studio

1. PROJECT OVERVIEW

CO2: Real-Life Project Using C# GUI and Database Integration

GoMart is a real-life scenario-based online grocery marketplace management system developed using **C# Windows Forms** and **Microsoft SQL Server**.

The project demonstrates how a desktop-based application can be connected to a relational database to perform practical business operations such as customer registration, seller management, product management, shopping cart operations, order processing, reviews, promotional offers, and financial management.

The system follows Object-Oriented Programming principles and uses graphical user interfaces to provide separate functionalities for customers, sellers, administrators, and super administrators.

The project satisfies the major requirements of CO2 by demonstrating:

- Real-life scenario-based application development
- Functional requirement identification
- C# graphical user interface development
- SQL Server database integration
- Data validation
- Data verification
- CRUD operations
- Stored procedure implementation
- Data flow between application and database

CO2 Evaluation Criteria

Evaluation Criteria	Evaluation Definition	Marks
Requirement Fulfillment	Proper demonstration of a real-life scenario with functional requirement identification for Object-Oriented Programming project development	5
Validation	Proper validation forms and data validation while dealing with application data	5
Verification	Verification of system data and functional requirements according to the application's data flow	5
Total		15

2. CO3: PREPARE AND EXPLAIN A REAL-LIFE DESKTOP-BASED APPLICATION

GoMart demonstrates the development and organization of a real-life desktop-based marketplace application.

The project satisfies CO3 through the following areas:

Evaluation Criteria	Evaluation Definition
Organization of Application	Proper organization of different modules and functionalities
Database Representation and Integration	Integration of SQL Server database with the C# application
Graphical User Interface	User-friendly Windows Forms interface developed using C#

The application is divided into different modules according to user roles. These modules include Customer, Seller, Admin, and Super Admin functionality.

3. CASE STUDY

GoMart is an online grocery and marketplace management system where customers can browse and purchase different products according to their requirements.

Products are organized into categories such as:

- Beverages
- Snacks
- Grocery

Customers can create an account by providing their username, password, full name, phone number, email address, and delivery address.

After successful login, customers can:

- Browse available products
- Search products
- Filter products by category
- View product prices
- View available quantities
- Add products to a shopping cart
- Remove products from the cart
- Place orders
- Select payment methods
- View order information
- Submit reviews and ratings
- View promotional offers

The system also provides functionality for sellers. Sellers can register with their name, age, phone number, and password. Sellers can provide products to the marketplace and manage their product information.

Each product can be associated with a particular category and seller.

Customers can submit reviews and ratings for products or sellers. The system also supports promotional offers and discounts.

A **Super Admin** manages seller requests and monitors marketplace activities. An **Admin** manages categories, products, sellers, customers, reviews, offers, bills, and financial information.

The application uses **Microsoft SQL Server** as the backend database and **C# Windows Forms** as the desktop application interface. Stored procedures are used for communication between the application and database.

4. PROBLEM STATEMENT

Traditional grocery businesses may maintain product, customer, seller, sales, and billing information manually or through disconnected systems. Such approaches can lead to:

- Data duplication
- Difficult product management
- Manual calculation errors
- Poor customer record management
- Difficult stock monitoring
- Inefficient seller management
- Difficult sales tracking
- Lack of centralized information
- Difficulty maintaining reviews and offers

GoMart addresses these problems by providing a centralized desktop-based marketplace management system connected to a relational SQL Server database.

5. OBJECTIVES OF THE PROJECT

The main objectives of GoMart are:

1. To develop a real-life online grocery marketplace system.
2. To provide customers with an easy way to browse products.
3. To allow customers to register and securely log in.
4. To allow sellers to manage their products.
5. To organize products according to categories.
6. To provide shopping cart functionality.
7. To allow customers to place orders.
8. To provide product and seller reviews.

9. To provide promotional offers and discounts.
10. To manage seller registration requests.
11. To allow administrators to manage users, sellers, categories, and products.
12. To maintain financial and commission information.
13. To integrate a SQL Server database with a C# desktop application.
14. To demonstrate validation and verification of application data.
15. To demonstrate Object-Oriented Programming concepts in a practical application.

6. SCOPE OF THE PROJECT

The scope of GoMart includes four major user roles:

Customer

Customers can register, log in, browse products, manage their carts, place orders, make payment selections, view orders, and submit reviews.

Seller

Sellers can register, manage their accounts, add products, update products, delete products, and monitor sales and orders.

Admin

The administrator can manage customers, sellers, categories, products, seller requests, reviews, offers, bills, and financial information.

Super Admin

The Super Admin manages seller requests and monitors marketplace activities, sellers, customers, products, and financial information.

7. USER ROLES

7.1 Customer

The customer is the main purchasing user.

Customer activities include:

- Registration
- Login

- Product browsing
- Product searching
- Category filtering
- Shopping cart
- Checkout
- Payment selection
- Order placement
- Order viewing
- Review submission
- Offer viewing
- Account management

7.2 Seller

Seller activities include:

- Seller registration
- Seller login
- Product addition
- Product updating
- Product deletion
- Product list viewing
- Order monitoring
- Sales monitoring
- Account updating

7.3 Admin

Admin activities include:

- Customer management
- Seller management
- Product management
- Category management
- Review management
- Offer management
- Seller request management
- Bill management
- Financial summary
- Record deletion

7.4 Super Admin

Super Admin activities include:

- Super Admin login

- Seller request management
- Seller monitoring
- Customer monitoring
- Product monitoring
- Marketplace monitoring
- Financial summary

8. FUNCTIONAL REQUIREMENTS

8.1 Customer Registration

A new customer can create an account by entering:

- Username
- Password
- Full Name
- Phone
- Email
- Address

The system checks whether the username already exists.

If the username is already registered, the system displays an error message.

8.2 Customer Login

Registered customers can log in using:

- Username
- Password

Only active customer accounts are allowed to access the customer system.

8.3 Product Browsing

Customers can view product information including:

- Product ID
- Product Name
- Category
- Seller
- Price
- Available Quantity

8.4 Product Search and Filtering

Customers and administrators can search and filter products according to categories.

Example categories:

- Beverages
- Snacks
- Grocery

8.5 Shopping Cart

Customers can add products to their shopping cart.

The cart stores:

- Customer
- Product
- Quantity
- Added Date
- Product Price
- Total Amount

Customers can also remove products from the cart.

8.6 Customer Order

Customers can place an order using products available in their cart.

An order contains:

- Order ID
- Customer ID
- Order Date
- Total Amount
- Payment Method
- Payment Status
- Order Status

8.7 Payment

The application allows customers to select a payment method.

Possible payment methods include:

- Cash on Delivery
- Card
- Mobile Banking

The system records:

- Payment Method
- Payment Status
- Order Status
- Total Amount

8.8 Seller Registration

A seller can provide:

- Seller Name
- Seller Age
- Seller Phone
- Password

Seller names must be unique.

8.9 Seller Product Management

Sellers can add and manage products.

Product information includes:

- Product Name
- Category
- Seller
- Price
- Quantity

8.10 Seller Account Management

Sellers can view and update:

- Seller ID
- Seller Name
- Seller Age

- Seller Phone
- Password

8.11 Seller Request Management

Potential sellers can submit a seller request containing:

- Seller Name
- Phone
- Business Name
- Request Date
- Request Status

Possible request statuses are:

- Pending
- Approved
- Rejected

The Super Admin can review and process these requests.

8.12 Review and Rating

Customers can submit reviews for products or sellers.

A review contains:

- Customer
- Seller
- Product
- Rating
- Comment
- Review Date
- Visibility

The rating is restricted to a value between **1 and 5**.

8.13 Offers and Discounts

The system supports promotional offers.

An offer contains:

- Offer ID
- Title
- Description
- Discount Percentage
- Start Date
- End Date
- Active Status

8.14 Super Admin Management

The Super Admin can:

- Manage seller requests
- Monitor sellers
- Monitor customers
- Monitor products
- Monitor marketplace information
- View financial information

8.15 Admin Management

The administrator can manage:

- Admin information
- Sellers
- Categories
- Products
- Customers
- Seller requests
- Reviews
- Offers
- Bills
- Financial information

The administrator can also delete inappropriate or unwanted records where appropriate.

8.16 Financial Summary

The system calculates:

- Total Sales
- GoMart Commission
- Seller Earnings

The current commission rate is 5%.

Example

Total Sales = 100,000

GoMart Commission:

$$100,000 \times 5\% = 5,000$$

Seller Earnings:

$$100,000 - 5,000 = 95,000$$

Therefore:

Financial Item	Amount
Total Sales	100,000
GoMart Commission	5,000
Seller Earnings	95,000

9. NON-FUNCTIONAL REQUIREMENTS

9.1 Usability

The application should provide a simple and understandable Windows Forms interface.

9.2 Performance

Database operations should be performed efficiently using stored procedures and parameterized SQL commands.

9.3 Reliability

The system should maintain data consistency through:

- Primary keys
- Foreign keys
- Constraints
- Validation
- Stored procedures

9.4 Maintainability

The application is divided into different modules so that individual components can be updated without affecting the entire system.

9.5 Security

User authentication is implemented through login functionality. In a production system, passwords should be securely hashed rather than stored as plain text.

10. TECHNOLOGIES USED

Frontend

- C#
- Windows Forms
- Visual Studio

Backend

- Microsoft SQL Server
- T-SQL
- Stored Procedures

Database Connectivity

- ADO.NET
- SqlConnection
- SqlCommand
- SqlDataAdapter
- DataTable

11. SYSTEM ARCHITECTURE

GoMart follows a three-layer logical structure:

The user interacts with the C# Windows Forms interface. The application processes the request and communicates with SQL Server through ADO.NET.

Stored procedures perform database operations such as insertion, updating, deletion, searching, authentication, and reporting.

12. OBJECT-ORIENTED PROGRAMMING CONCEPTS

The GoMart project demonstrates several Object-Oriented Programming concepts.

12.1 Classes and Objects

Different application components can be represented using classes such as:

- Customer
- Seller
- Product
- Category
- Order
- Review
- Offer
- Admin

Objects of these classes represent actual system entities.

12.2 Encapsulation

Data and operations are grouped into appropriate classes.

For example, customer-related data and customer-related operations can be managed through a Customer class.

12.3 Abstraction

The user does not need to know how SQL queries are executed internally. The user interacts with buttons and forms while the application handles database operations behind the interface.

12.4 Inheritance

Common functionality can be reused through inheritance where appropriate, for example, common account or user functionality.

12.5 Polymorphism

Different user roles can perform different operations through role-specific interfaces and methods.

13. DATABASE DESIGN

The database is named:

GoMartDB

The major tables are:

1. tblAdmin
 2. tblSeller
 3. tblCategory
 4. tblProduct
 5. tblBill
 6. tblSuperAdmin
 7. tblCustomer
 8. tblSellerRequest
 9. tblReview
 10. tblOffer
 11. tblCart
 12. tblCustomerOrder
 13. tblCustomerOrderDetail
 14. tblCommission
-

14. DATABASE SCHEMA

14.1 tblAdmin

Field	Data Type	Description
AdminID	NVARCHAR(50)	Primary Key
Password	NVARCHAR(50)	Admin password
FullName	NVARCHAR(50)	Admin name

14.2 tblSeller

Field	Data Type	Description
SellerID	INT	Primary Key
SellerName	NVARCHAR(50)	Unique seller name
SellerAge	INT	Seller age
SellerPhone	NVARCHAR(20)	Seller phone
SellerPass	NVARCHAR(50)	Seller password

14.3 tblCategory

Field	Data Type	Description
CategoryID	INT	Primary Key
Category	NVARCHAR(50)	Category name
Description	NVARCHAR(250)	Category description

Example categories:

- Beverages
 - Snacks
 - Grocery
-

14.4 tblProduct

Field	Data Type	Description
ProdID	INT	Primary Key
ProdName	NVARCHAR(50)	Product name
ProdCatID	INT	Foreign Key
SellerID	INT	Foreign Key
ProdPrice	DECIMAL(10,2)	Product price

Field	Data Type	Description
ProdQty	INT	Available quantity

Relationships:

ProdCatID → tblCategory(CategoryID)
 SellerID → tblSeller(SellerID)

14.5 tblBill

Field	Data Type	Description
Bill_Id	INT	Primary Key
SellerID	INT	Foreign Key
SellDate	DATETIME	Selling date
TotalAmount	DECIMAL(18,2)	Bill amount

14.6 tblSuperAdmin

Field	Data Type	Description
SuperAdminID	INT	Primary Key
UserName	NVARCHAR(50)	Unique username
Password	NVARCHAR(100)	Password
FullName	NVARCHAR(100)	Name
IsActive	BIT	Account status

14.7 tblCustomer

Field	Data Type	Description
CustomerID	INT	Primary Key
UserName	NVARCHAR(50)	Unique username
Password	NVARCHAR(100)	Password
FullName	NVARCHAR(100)	Customer name
Phone	NVARCHAR(20)	Phone
Email	NVARCHAR(100)	Email
Address	NVARCHAR(250)	Delivery address
IsActive	BIT	Account status
CreatedAt	DATETIME	Registration date

14.8 tblSellerRequest

Field	Data Type	Description
RequestID	INT	Primary Key
SellerName	NVARCHAR(100)	Applicant name
Phone	NVARCHAR(20)	Phone
BusinessName	NVARCHAR(100)	Business name
RequestDate	DATETIME	Request date
Status	NVARCHAR(20)	Pending/Approved/Rejected
ApprovedBy	INT	Super Admin

14.9 tblReview

Field	Data Type	Description
ReviewID	INT	Primary Key
CustomerID	INT	Foreign Key
SellerID	INT	Foreign Key
ProdID	INT	Foreign Key
Rating	INT	Rating from 1–5
Comment	NVARCHAR(1000)	Customer comment
ReviewDate	DATETIME	Review date
IsVisible	BIT	Review visibility

14.10 tblOffer

Field	Data Type	Description
OfferID	INT	Primary Key
Title	NVARCHAR(150)	Offer title
Description	NVARCHAR(500)	Offer details
DiscountPercent	DECIMAL(5,2)	Discount percentage
StartDate	DATETIME	Start date

Field	Data Type	Description
EndDate	DATETIME	End date
IsActive	BIT	Active status

14.11 tblCart

Field	Data Type	Description
CartID	INT	Primary Key
CustomerID	INT	Foreign Key
ProdID	INT	Foreign Key
Quantity	INT	Product quantity
AddedAt	DATETIME	Added date

14.12 tblCustomerOrder

Field	Data Type	Description
OrderID	INT	Primary Key
CustomerID	INT	Foreign Key
OrderDate	DATETIME	Order date
TotalAmount	DECIMAL(18,2)	Order amount
PaymentMethod	NVARCHAR(30)	Payment method
PaymentStatus	NVARCHAR(30)	Payment status
OrderStatus	NVARCHAR(30)	Order status

14.13 tblCustomerOrderDetail

Field	Data Type	Description
OrderDetailID	INT	Primary Key
OrderID	INT	Foreign Key
ProdID	INT	Foreign Key
Quantity	INT	Quantity
UnitPrice	DECIMAL(18,2)	Unit price
Amount	Computed	Quantity × Unit Price

The computed amount is:

Amount = Quantity × UnitPrice

14.14 tblCommission

Field	Data Type	Description
CommissionID	INT	Primary Key
OrderID	INT	Foreign Key
SellerID	INT	Foreign Key
SaleAmount	DECIMAL(18,2)	Sale amount
CommissionPercent	DECIMAL(5,2)	Commission percentage
CommissionAmount	DECIMAL(18,2)	Commission
CreatedAt	DATETIME	Creation date

15. DATABASE RELATIONSHIPS

The major database relationships are:

A category can contain many products, while each product belongs to one category.

A seller can manage multiple products.

A customer can have multiple cart items, and each cart item refers to a product.

A customer can place multiple orders. Each order can contain multiple order details.

Reviews connect customers with products and sellers.

Commission information connects orders and sellers.

16. ENTITY RELATIONSHIP DIAGRAM

17. DATABASE CREATION

The GoMart database is created using SQL Server.

```
USE master;
GO

IF DB_ID('GoMartDB') IS NULL
BEGIN
    CREATE DATABASE GoMartDB;
END
GO

USE GoMartDB;
```

GO

This method checks whether the database already exists.

If it exists, it is not deleted or recreated.

The following command should **not** be used:

```
DROP DATABASE GoMartDB;
```

This prevents accidental deletion of the project database.

18. MAIN TABLE CREATION

tblAdmin

```
CREATE TABLE tblAdmin
(
    AdminID NVARCHAR(50) PRIMARY KEY,
    [Password] NVARCHAR(50) NOT NULL,
    FullName NVARCHAR(50)
);
GO
```

tblSeller

```
CREATE TABLE tblSeller
(
    SellerID INT IDENTITY(1,1) PRIMARY KEY,
    SellerName NVARCHAR(50) UNIQUE NOT NULL,
    SellerAge INT,
    SellerPhone NVARCHAR(20),
    SellerPass NVARCHAR(50)
);
GO
```

tblCategory

```
CREATE TABLE tblCategory
(
    CategoryID INT IDENTITY(1,1) PRIMARY KEY,
    Category NVARCHAR(50) NOT NULL UNIQUE,
    Description NVARCHAR(250)
);
GO
```

tblProduct

```
CREATE TABLE tblProduct
(
    ProdID INT IDENTITY(1,1) PRIMARY KEY,
    ProdName NVARCHAR(50) NOT NULL,
    ProdCatID INT NOT NULL,
    SellerID INT NULL,
```

```

ProdPrice DECIMAL(10,2) NOT NULL,
ProdQty INT NOT NULL,

CONSTRAINT FK_Product_Category
    FOREIGN KEY (ProdCatID)
    REFERENCES tblCategory(CategoryID),

CONSTRAINT FK_Product_Seller
    FOREIGN KEY (SellerID)
    REFERENCES tblSeller(SellerID)
);
GO

tblCustomer

CREATE TABLE tblCustomer
(
    CustomerID INT IDENTITY(1,1) PRIMARY KEY,
    UserName NVARCHAR(50) UNIQUE NOT NULL,
    [Password] NVARCHAR(100) NOT NULL,
    FullName NVARCHAR(100) NOT NULL,
    Phone NVARCHAR(20),
    Email NVARCHAR(100),
    Address NVARCHAR(250),
    IsActive BIT NOT NULL DEFAULT 1,
    CreatedAt DATETIME NOT NULL DEFAULT GETDATE()
);
GO

```

19. CRUD OPERATIONS

The system performs the four fundamental database operations.

Create

Used for:

- Customer registration
- Seller registration
- Category insertion
- Product insertion
- Cart insertion
- Order insertion
- Review insertion
- Offer insertion

Read

Used for:

- Product browsing

- Customer information
- Seller information
- Order information
- Reviews
- Offers
- Financial summaries

Update

Used for:

- Customer profile
- Seller profile
- Product information
- Category information
- Order status
- Review visibility

Delete

Used for:

- Products
- Categories
- Sellers
- Customers
- Reviews
- Offers

20. STORED PROCEDURES

Stored procedures are used to separate database operations from the C# interface.

Important stored procedures include:

Admin

```
spAdminLogin
spUpdateAdmin
spDeleteAdmin
```

Seller

```
spSellerLogin
spSellerInsert
spSellerUpdate
spGetAllSeller
spSellerDelete
```

Category

spCatInsert
spGetCategory
spCategoryUpdate
spCategoryDelete

Product

spCheckDuplicateProduct
spInsertProduct
spInsertProductWithSeller
spGetAllProductList
spUpdateProduct
spUpdateProductWithSeller
spDeleteProduct
spGetAllProductList_SearchbyCat

Billing

InsertBill

Super Admin

spSuperAdminLogin

Customer

spCustomerRegister
spCustomerLogin
spCustomerUpdate

Seller Request

spSellerRequestInsert
spGetSellerRequests

Review

spInsertReview
spGetReviews

Offers

spGetActiveOffers

Cart

spAddToCart
spGetCustomerCart
spRemoveFromCart

Reporting

spGetFinancialSummary
spGetCustomerOrderSummary

Stored procedures improve organization and allow the C# application to communicate with SQL Server using defined database operations.

21. ADO.NET DATABASE INTEGRATION

The C# Windows Forms application communicates with SQL Server using ADO.NET.

Important classes include:

SqlConnection

Used to establish a connection with SQL Server.

SqlCommand

Used to execute SQL commands and stored procedures.

SqlDataAdapter

Used to retrieve data from SQL Server.

DataTable

Used to hold retrieved data in memory for display in controls such as DataGridView.

General data flow:

Parameterized commands should be used to reduce the risk of SQL injection.

22. VALIDATION

Validation is an important part of GoMart.

22.1 Username Validation

Duplicate usernames are not allowed.

Example:

```
IF EXISTS
(
    SELECT 1
    FROM tblCustomer
    WHERE UserName = @UserName
)
BEGIN
    RAISERROR('Username already exists.',16,1);
    RETURN;
END
```

22.2 Seller Validation

Seller names must be unique.

The system checks the database before creating a seller record.

22.3 Product Validation

The system validates duplicate products according to the project's business rule.

A product should not be unnecessarily duplicated under the same category.

22.4 Rating Validation

The rating must be between 1 and 5.

```
Rating INT CHECK (Rating BETWEEN 1 AND 5)
```

22.5 Quantity Validation

Cart quantity must be greater than zero.

```
Quantity INT CHECK (Quantity > 0)
```

22.6 Price Validation

Product price cannot be negative.

```
ProdPrice DECIMAL(10,2)
```

```
CHECK (ProdPrice >= 0)
```

22.7 Offer Validation

Discount percentages should remain between 0 and 100.

$$0\% \leq \text{DiscountPercent} \leq 100\%$$

22.8 Required Field Validation

Important fields such as:

- Username
- Password
- Customer name
- Product name
- Category
- Product price

should not be left empty.

23. VERIFICATION

Verification checks whether the data stored in SQL Server matches the operations performed through the application.

Check Customers

```
SELECT * FROM tblCustomer;
```

Check Sellers

```
SELECT * FROM tblSeller;
```

Check Categories

```
SELECT * FROM tblCategory;
```

Check Products

```
SELECT * FROM tblProduct;
```

Check Orders

```
SELECT * FROM tblCustomerOrder;
```

Check Order Details

```
SELECT * FROM tblCustomerOrderDetail;
```

Check Reviews

```
SELECT * FROM tblReview;
```

Check Offers

```
SELECT * FROM tblOffer;
```

Check Cart

```
SELECT * FROM tblCart;
```

Check Commission

```
SELECT * FROM tblCommission;
```

Check Bills

```
SELECT * FROM tblBill;
```

Check Seller Requests

```
SELECT * FROM tblSellerRequest;
```

These queries allow the developer to verify whether records have been inserted, updated, or deleted correctly.

24. SYSTEM DATA FLOW

24.1 Customer Data Flow

25. SELLER DATA FLOW

26. ADMIN DATA FLOW

27. USER INTERFACE / GUI

The GoMart application uses C# Windows Forms to provide a graphical interface.

27.1 Login Page

The login page allows users to select their role.

Possible roles:

- Admin
- Super Admin
- Seller
- Customer

GOMART LOGIN

Role: [Customer ▼]

[Logout]

31.3 Admin Customer Management

Customer ID	Username	Full Name	Phone
1	testcustomer	Test Customer	01800000000

The administrator can view details and manage customer accounts.

31.4 Admin Seller Management

Seller ID	Seller Name	Age	Phone
1	TestSeller	25	01700000000

The administrator can update or delete sellers where appropriate.

31.5 Admin Product Management

The administrator can:

- Add product
- Update product
- Delete product
- Search product
- Filter product by category
- View seller
- View price
- View stock

32. SUPER ADMIN GUI

The Super Admin dashboard provides:

- Seller Requests
- Sellers
- Customers
- Products
- Marketplace Information
- Financial Summary

Seller request workflow:

33. REVIEW NAVIGATION

Customers can write reviews after viewing their order or purchased product.

43. SAMPLE DATA

43.1 Admin

```
INSERT INTO tblAdmin
(AdminID, [Password], FullName)
VALUES
('Coder', '12345', 'GoMart Admin');
```

43.2 Super Admin

```
INSERT INTO tblSuperAdmin
(UserName, [Password], FullName)
VALUES
('superadmin', '12345', 'GoMart Super Admin');
```

43.3 Categories

```
INSERT INTO tblCategory
(Category, Description)
VALUES
('Beverages', 'Drinks and beverages'),
('Snacks', 'Chips and snacks'),
('Grocery', 'Daily grocery items');
```

43.4 Seller

```
INSERT INTO tblSeller
(SellerName, SellerAge, SellerPhone, SellerPass)
VALUES
('TestSeller', 25, '01700000000', '12345');
```

43.5 Customer

```
EXEC spCustomerRegister
    @UserName = 'testcustomer',
    @Password = '12345',
    @FullName = 'Test Customer',
    @Phone = '018000000000',
    @Email = 'test@gmail.com',
    @Address = 'Dhaka, Bangladesh';
```

44. SAMPLE PRODUCTS

```
INSERT INTO tblProduct
(
    ProdName,
    ProdCatID,
    SellerID,
    ProdPrice,
    ProdQty
)
VALUES
(
    'Coca Cola',
    (SELECT CategoryID
     FROM tblCategory
     WHERE Category = 'Beverages'),
    (SELECT SellerID
     FROM tblSeller
     WHERE SellerName = 'TestSeller'),
    50.00,
    100
),
(
    'Potato Chips',
    (SELECT CategoryID
     FROM tblCategory
     WHERE Category = 'Snacks'),
    (SELECT SellerID
     FROM tblSeller
     WHERE SellerName = 'TestSeller'),
    30.00,
    50
),
(
    'Rice',
    (SELECT CategoryID
     FROM tblCategory
     WHERE Category = 'Grocery'),
    (SELECT SellerID
     FROM tblSeller
     WHERE SellerName = 'TestSeller'),
    80.00,
    100
);
```

45. SAMPLE CUSTOMER CART CALCULATION

Suppose a customer purchases:

Product	Unit Price	Quantity	Amount
Coca Cola	50	2	100
Rice	80	1	80
Total			180

Therefore:

$$\begin{aligned}\text{Total Amount} &= 100 + 80 \\ &= 180\end{aligned}$$

46. FINANCIAL CALCULATION

GoMart uses a 5% marketplace commission.

Formula:

$$\begin{aligned}\text{Commission Amount} &= \\ \text{Total Sales} \times \text{Commission Percentage} / 100\end{aligned}$$

Seller earnings:

$$\begin{aligned}\text{Seller Earnings} &= \\ \text{Total Sales} - \text{Commission Amount}\end{aligned}$$

For total sales of 500,000:

$$\begin{aligned}\text{Commission} &= 500,000 \times 5 / 100 \\ &= 25,000\end{aligned}$$

$$\begin{aligned}\text{Seller Earnings} &= 500,000 - 25,000 \\ &= 475,000\end{aligned}$$

Financial summary:

Total Sales:	₹500,000
GoMart Commission:	₹25,000
Seller Earnings:	₹475,000

47. TESTING

Testing is performed to verify whether the application works according to its functional requirements.

Test Case 1 – Customer Registration

Item	Description
Input	New username and customer details
Expected Result	Customer account created
Result	Pass

Test Case 2 – Duplicate Username

Item	Description
Input	Existing username
Expected Result	Error message
Result	Pass

Test Case 3 – Customer Login

Item	Description
Input	Valid username/password
Expected Result	Customer dashboard opens
Result	Pass

Test Case 4 – Invalid Login

Item	Description
Input	Incorrect password
Expected Result	Login rejected
Result	Pass

Test Case 5 – Add Product to Cart

Item	Description
Input	Product and quantity
Expected Result	Product added to cart
Result	Pass

Test Case 6 – Invalid Quantity

Item	Description
Input	Quantity = 0
Expected Result	Validation error
Result	Pass

Test Case 7 – Product Addition

Item	Description
Input	Valid product information
Expected Result	Product saved
Result	Pass

Test Case 8 – Duplicate Seller

Item	Description
Input	Existing seller name
Expected Result	Duplicate error
Result	Pass

Test Case 9 – Review Rating

Item	Description
Input	Rating = 6
Expected Result	Validation error
Result	Pass

Test Case 10 – Order Placement

Item	Description
Input	Valid cart and payment information
Expected Result	Order created
Result	Pass

48. VERIFICATION OF REQUIREMENTS

The following requirements are verified through the application and database.

Requirement	Verification Method
Customer Registration	Check tblCustomer
Customer Login	Execute login procedure

Requirement	Verification Method
Product Management	Check tblProduct
Category Management	Check tblCategory
Cart	Check tblCart
Orders	Check tblCustomerOrder
Order Details	Check tblCustomerOrderDetail
Reviews	Check tblReview
Offers	Check tblOffer
Seller Management	Check tblSeller
Seller Requests	Check tblSellerRequest
Bills	Check tblBill
Commission	Check tblCommission

This verification ensures that operations performed through the graphical interface are reflected correctly in SQL Server.

49. SECURITY AND DATA INTEGRITY

The application uses several mechanisms to protect data integrity.

Primary Keys

Each major table contains a primary key to uniquely identify records.

Foreign Keys

Foreign keys maintain relationships between tables.

Examples:

```
tblProduct → tblCategory
tblProduct → tblSeller
tblCart → tblCustomer
tblCart → tblProduct
tblCustomerOrder → tblCustomer
tblCustomerOrderDetail → tblCustomerOrder
tblCustomerOrderDetail → tblProduct
```

Unique Constraints

Unique constraints are used for:

- Customer username

- Seller name
- Category name
- Super Admin username

Check Constraints

Check constraints can enforce:

- Positive quantity
- Non-negative price
- Rating between 1 and 5

Parameterized Database Commands

The C# application should use parameters rather than constructing SQL statements by concatenating user input.

Password Security

The sample data uses simple demonstration passwords. In a real production application, passwords should be stored using secure password hashing rather than plain text.

50. DATA INTEGRITY AND BUSINESS RULES

Important business rules include:

1. Customer usernames must be unique.
 2. Seller names must be unique.
 3. Product prices cannot be negative.
 4. Product quantities cannot be negative.
 5. Cart quantities must be greater than zero.
 6. Ratings must be between 1 and 5.
 7. Offer discounts should remain between 0% and 100%.
 8. Only active customer accounts can log in.
 9. Seller requests have controlled statuses.
 10. Commission calculations use a 5% rate.
 11. Order details must reference valid orders.
 12. Product records must reference valid categories.
 13. Product records may reference valid sellers.
-

51. SYSTEM WORKFLOW

The complete GoMart workflow can be summarized as:

52. ADVANTAGES OF THE SYSTEM

GoMart provides several advantages:

Centralized Data

Customer, seller, product, order, review, and financial data are stored in one database.

Easy Product Management

Sellers can add, update, and delete products.

Improved Customer Experience

Customers can search, filter, and manage products through the GUI.

Reduced Manual Work

Automated database operations reduce manual record keeping.

Data Validation

The application prevents common data-entry errors.

Financial Management

Commission and seller earnings can be calculated automatically.

Role-Based Functionality

Different users receive different functionalities based on their roles.

Database Integration

C# and SQL Server work together to create a complete desktop application.

53. LIMITATIONS

Although GoMart demonstrates the major requirements of an online grocery marketplace, some limitations remain.

1. It is primarily a desktop-based application.
2. The payment functionality represents payment information/status rather than a full external payment gateway.
3. Delivery tracking is limited.
4. Real-time notifications are not implemented.
5. Password hashing should be added for production deployment.
6. Product-offer association can be expanded for more detailed promotional campaigns.
7. Advanced reporting and analytics can be added.
8. A dedicated delivery management module is not included.

54. FUTURE IMPROVEMENTS

Future versions of GoMart can include:

54.1 Online Payment Gateway

Integration with payment services can allow real online transactions.

54.2 Password Hashing

Passwords should be stored using secure hashing and salting.

54.3 Delivery Management

A delivery module can manage:

- Delivery personnel
- Delivery address
- Delivery status
- Estimated delivery time

54.4 Advanced Search

Search can support:

- Product name
- Price range
- Seller
- Category
- Rating

54.5 Advanced Reports

The system can generate:

- Daily sales reports
- Monthly sales reports
- Seller performance reports
- Best-selling products
- Customer purchase reports
- Commission reports

54.6 Product-Specific Offers

Offers can be associated directly with products or categories so that discounts can be automatically applied during checkout.

54.7 Notifications

Email or application notifications can be used for:

- Order confirmation
- Payment confirmation
- Delivery updates
- Seller approval
- Promotional offers

54.8 Web or Mobile Version

The system can later be converted into a web or mobile application while keeping the same database concept.

55. PROJECT REQUIREMENT FULFILLMENT

GoMart fulfills the major project requirements as follows:

Requirement	Implementation
Real-Life Scenario	Online grocery marketplace
C# GUI	Windows Forms
Database	SQL Server
Database Integration	ADO.NET
OOP	Classes, objects, encapsulation, abstraction
Customer Management	Registration, login, account
Seller Management	Registration, products, account
Product Management	CRUD operations
Category Management	CRUD operations
Shopping Cart	Add/remove products
Order Management	Orders and order details
Payment	Payment method/status
Reviews	Rating and comments

Requirement	Implementation
Offers	Promotional offer management
Seller Requests	Pending/Approved/Rejected
Financial Management	Sales and commission
Validation	Constraints and procedures
Verification	SQL queries and database checks
Stored Procedures	Database operation procedures

56. CO2 REQUIREMENT ANALYSIS

The project fulfills CO2 through three major areas.

Requirement Fulfillment

GoMart demonstrates a real-world marketplace scenario and identifies functional requirements for customers, sellers, administrators, and super administrators.

Validation

The application validates:

- Duplicate usernames
- Duplicate sellers
- Duplicate products
- Product prices
- Quantities
- Ratings
- Required fields
- Offer percentages

Verification

The project verifies application data using SQL queries and stored procedures.

For example:

```
SELECT * FROM tblCustomer;
SELECT * FROM tblSeller;
SELECT * FROM tblCategory;
SELECT * FROM tblProduct;
SELECT * FROM tblCustomerOrder;
SELECT * FROM tblCustomerOrderDetail;
SELECT * FROM tblReview;
SELECT * FROM tblOffer;
```

```
SELECT * FROM tblCart;  
SELECT * FROM tblCommission;
```

Therefore, the project demonstrates both data validation and verification.

57. CO3 REQUIREMENT ANALYSIS

Organization of Application

The application is divided into:

- Customer module
- Seller module
- Admin module
- Super Admin module
- Product module
- Category module
- Cart module
- Order module
- Review module
- Offer module
- Financial module

This provides a clear organization of functionalities.

Database Representation and Integration

SQL Server stores the application's persistent data.

C# communicates with SQL Server through ADO.NET and stored procedures.

Graphical User Interface

Windows Forms provides:

- Login forms
- Registration forms
- Dashboards
- Product forms
- Cart forms
- Payment forms
- Management forms
- DataGridView-based records
- Search and filtering interfaces

58. DEMONSTRATION SEQUENCE

For a project demonstration, the following sequence can be followed:

Step 1

Start SQL Server and ensure that `GoMartDB` is available.

Step 2

Run the C# Windows Forms application.

Step 3

Display the login selection screen.

Step 4

Register a customer.

Step 5

Log in as the customer.

Step 6

Display the product list.

Step 7

Search or filter products.

Step 8

Add a product to the cart.

Step 9

Display the cart total.

Step 10

Proceed to checkout.

Step 11

Select a payment method.

Step 12

Create the order.

Step 13

Verify the order in SQL Server.

Step 14

Log in as seller.

Step 15

Add/update/delete a product.

Step 16

Verify the product in SQL Server.

Step 17

Log in as Admin.

Step 18

Display customers, sellers, products, categories, reviews, offers, bills, and financial summary.

Step 19

Log in as Super Admin.

Step 20

Demonstrate seller request approval/rejection.

59. CONCLUSION

GoMart is a real-life **Online Grocery Marketplace Management System** developed using **C# Windows Forms and Microsoft SQL Server**.

The system provides separate functionality for customers, sellers, administrators, and super administrators.

Customers can register, log in, browse products, search products, filter products by category, add products to their shopping cart, place orders, select payment methods, view order information, and submit reviews.

Sellers can manage their accounts and products, while administrators can manage customers, sellers, categories, products, seller requests, reviews, offers, bills, and financial information.

The Super Admin provides an additional level of marketplace management, particularly for seller requests and marketplace monitoring.

The project demonstrates important **Object-Oriented Programming concepts**, graphical user interface development, relational database design, SQL Server integration, ADO.NET, stored procedures, CRUD operations, primary keys, foreign keys, constraints, validation, verification, and data flow.

The database provides a structured way to store and manage the application's information, while the C# Windows Forms interface provides a user-friendly environment for interacting with the system.

The project also demonstrates marketplace financial management through a **5% GoMart commission calculation**.

Overall, GoMart successfully demonstrates how a desktop-based C# application can be integrated with a relational SQL Server database to solve a practical real-world business problem. It fulfills the major requirements of CO2 and CO3 by providing a well-organized application, database integration, graphical user interface, validation, verification, and real-life business functionality.

60. FINAL PROJECT SUMMARY

Project Name	: GoMart
Application Type	: Desktop-Based Application
Domain	: Online Grocery Marketplace
Frontend	: C# Windows Forms
Backend	: Microsoft SQL Server
Database	: GoMartDB
Connectivity	: ADO.NET
Database Language	: T-SQL
Architecture	: GUI + Application Logic + Database

Main Users : Customer, Seller, Admin, Super Admin
Commission : 5%
